Reading Homework 2

Book 2 Unit 3

Passage A

A A group of students wanted to create a digital guide to their town. They first planned a website with photographs of local shops, parks and bus stops. However, their teacher asked them to find out what visitors really needed before choosing the design. The students collected questions at the railway station. Many visitors wanted simple directions and opening times, rather than a long history of every building. This changed the group's plan. They decided to make important information easy to find on a smartphone.

B The first version had a colourful map and many large photographs. It looked attractive on a computer, but the pictures took a long time to download on some phones. The students reduced the picture sizes and removed a moving advert from the top of the page. They kept a short text description beside each image. A visitor could still understand the main information even if a picture did not appear. The students learned that an exciting design was not always the most useful one.

C Next, the group asked six people to try the guide. Each person had to find a bus stop and check when the local museum opened. The students watched without helping at first. Several users missed a button because it looked like part of a photograph. Others found the writing too small. The group changed the button's colour and made the text larger. They tested the same tasks again to see whether the changes helped. They did not assume that a change was an improvement simply because they liked it.

Passage A

D The website was free to use and did not require an email address. Visitors could save a map on their phones before leaving a place with Wi-Fi. This helped when the internet connection was poor. The group did not collect users' names or record their journeys. A teacher checked the information before the guide went online. The students also printed a few paper maps for people who did not have a suitable device. Technology gave visitors another choice, but it was not the only way to get help.

E After the guide opened, the students checked it every Friday. A shop might close, or a bus time might change. One student checked opening times while another tested the links. Visitors could report a mistake through a simple form. The group kept these messages separate from the public pages. Creating the guide was only the beginning: keeping it accurate required regular work. A useful digital tool needs both a clear design and information that people can trust.
