Passage A - Many Kinds of Work at CERN

A At CERN, particle research studies very small parts of matter and depends on many kinds of work. Its careers site lists physics, engineering, and campus or corporate services. This means that one scientific workplace contains more than one **occupation**. A student who likes people, information, things, or ideas can find a different connection. CERN also says that its success depends on technicians, engineers, and support services, not only physicists. These preferences describe different interests rather than fixed job titles. CERN's official descriptions use its own fields of work, and a role can involve several interests at once.

B Work with people appears in human resources and communication. CERN says its human-resources team helps create an inclusive environment where different people feel welcome. Communication staff build public, political, and financial support for CERN's mission. A **manager** or **employee** in these areas spends time listening, explaining, and solving problems. A **colleague** is part of a wider team that connects support staff with scientists and engineers. Such work suits someone who enjoys helping and talking, although it also needs careful planning.

C Other roles focus on information. CERN's data teams turn information into useful findings. Finance staff help manage resources responsibly. They check how money is used. Other staff help people work together. In an **office**, a worker may **organize** schedules, records, or budgets. Each **department** uses information for a different purpose. Someone who likes lists and news may enjoy finding patterns or keeping a project ready. Information work is not limited to computer programming.

Passage A - Many Kinds of Work at CERN

D People who prefer working with things can look at engineering, facilities, or logistics. CERN's mechanical engineers design, build, and maintain machinery and experimental systems. Logistics staff coordinate the movement of people, materials, and equipment. Facilities teams develop buildings and everyday services. All have the same broad **goal** of keeping research possible. Procurement, or buying what CERN needs, connects CERN with an industry **partner** that can supply goods, services, or expertise. These jobs make scientific ideas work in a physical place. An experiment needs equipment, reliable services, and a safe place before researchers can test an idea.

E Ideas remain important too. Theoretical physicists turn abstract concepts, or general ideas, into predictions that experiments can test. Experimental physicists design experiments and study data. Communication workers also turn difficult science into messages that other people can understand. Before students **apply** for a job, they should compare its daily tasks instead of looking only at its title. One role can mix people, information, things, and ideas. CERN's careers page therefore offers more than a list of job titles. A preference is a starting point for exploration, not a final decision.

☐ A ☐ B ☐ C ☐ D ☐ E ☐ F ☐ G

15. Choose the best heading for Paragraph E.

☐ A ☐ B ☐ C ☐ D ☐ E ☐ F ☐ G

Questions 16-20 Single choice

Tick **ONE** answer, A-C, for each question.

16. What does Paragraph A show about the range of work at CERN?

- ☐ A. Only physicists contribute to its research.
- ☐ B. It determines the prices of railway tickets.
- ☐ C. Several kinds of skills contribute to the same scientific workplace.

17. Which field turns abstract concepts into predictions that can be tested?

- ☐ A. Catering
- ☐ B. Experimental physics
- ☐ C. Theoretical physics

18. What work is assigned to experimental physicists?

- ☐ A. Designing experiments and studying data
- ☐ B. Delivering sports equipment
- ☐ C. Turning abstract concepts into predictions

19. Why should a student examine daily tasks before choosing a role?

- ☐ A. One role can combine several kinds of work.
- ☐ B. It predicts the weather for the next day.
- ☐ C. A title always shows every kind of work involved.

20. Which field connects CERN with companies that can provide goods or expertise?

- ☐ A. A theatre club
- ☐ B. Logistics
- ☐ C. Procurement

Questions 21-25 Single choice

Tick **ONE** answer, A-C, for each question.

21. What must an experiment have before researchers can test an idea?

- ☐ A. A job title and a preference letter
- ☐ B. Working equipment, dependable operations, and a safe location
- ☐ C. A menu for a party

22. What do facilities teams develop?

- ☐ A. Site buildings and everyday facilities
- ☐ B. Supplier contracts with industry
- ☐ C. Railway timetables for a holiday

23. What does Paragraph C show about information work?

- ☐ A. It predicts the result of a football match.
- ☐ B. It includes several purposes and is not only programming.
- ☐ C. It consists only of writing software.

24. What additional task for communication workers appears in Paragraph E?

- ☐ A. Building experimental systems
- ☐ B. Turning difficult science into clear messages
- ☐ C. Growing food for the cafeteria

25. What is the passage's main lesson for career exploration?

- ☐ A. A preference can start exploration, but it does not make the final decision.
- ☐ B. Every role belongs to one fixed preference group.
- ☐ C. It determines when a football match begins.
