Passage B - A Museum Tour Built from Words, Sound, and Touch

A Most art museums are organised around looking. What happens when a visitor is **blind** or has low vision? At the Smithsonian American Art Museum in Washington, DC, America InSight tours use words, sound, and touch. Their purpose is to give visitors more ways to connect with art and the building around it.

B The programme is led by volunteer docents, or museum guides. Museum specialists **train** them to use verbal and sensory description, or words about what people can sense. On a tour, a docent does more than name colours or objects. Clear language can describe size, shape, position, material, and mood. This work is **difficult** because the listener needs both detail and a clear order.

C A tour may begin in the Kogod Courtyard. One docent described asking visitors to notice its sounds and smells while hearing about its visual features and history. This **friendly** opening gives everyone a shared starting point. It also shows that a museum visit can involve several senses from the first minute.

D An hour is not rushed. The group may explore only three or four artworks. The docent can spend time building a complete picture, and a **patient** visitor can ask questions or think between details. Rather than racing past many labels, the group stays with a small number of carefully chosen works.

E Movement through the museum matters too. Docents describe physical spaces as the group walks, helping visitors understand where they are. They regularly ask for feedback and adjust the amount of detail. A visitor with museum experience may want something different from a visitor who is becoming **confident** in a gallery.

Passage B - A Museum Tour Built from Words, Sound, and Touch

F Touch is planned, not automatic. On some tours, visitors may safely touch one or two sculptures while wearing gloves. A small canvas with different paint textures can also explain an artist's choices. These objects reveal the artist's **talent** through the hands, while **sensible** rules protect the original work.

G Choice is one of the programme's central ideas. Sighted visitors decide when to read a label or how long to study an object. The docent can **respect** the same freedom by asking how and when someone wants information. The official programme page says touch components may be included, so each visit can differ.

H America InSight shows how access can change an ordinary museum habit. Description, touch, sound, and conversation work together. A well-chosen phrase can **inspire** an image in the mind, but the visitor still makes the meaning. The museum currently offers docent-led tours and can also arrange tours for groups on request.
