Passage A - What a Fund Reveals in Its Documents

A People who **invest** through a mutual fund buy shares in a collection of assets, rather than choose every asset themselves. The fund combines money from many participants, and registered advisers manage what it owns. That collection can include **stocks and shares**, bonds and other assets. A share represents part ownership of the collection and of its gains or losses. This arrangement gives a **professional** manager a role, but it does not turn the fund into a guaranteed bank account. The United States Securities and Exchange Commission explains these distinctions on its Investor.gov website.

B A mutual fund uses a document called a prospectus to describe its **investment** objectives, methods, risks, fees and past results. The prospectus is available free of charge from the fund and from the SEC's public database, EDGAR. A shorter summary identifies where the full document can be obtained. This information exists separately from a fund's name or an attractive advertisement. The name may suggest a focus, but the document explains how the fund intends to operate. An aim of growth, for example, is different from a promise of a particular outcome.

C Some funds aim to receive **income** from the assets they own, such as payments from bonds. Others mainly seek assets expected to increase in **value**, and some combine both aims. Those aims influence what the manager buys. The prospectus also describes risks, which depend on the assets and approach. A fund concentrated in one industry has different exposure from a fund spread across several industries. The description therefore connects a goal with a method and with possible losses, rather than showing only the result its managers hope to achieve.

Passage A - What a Fund Reveals in Its Documents

D Costs are another part of the picture. The SEC requires a standard table of fund fees and expenses in the prospectus. Some charges concern a **purchase** or another transaction, while annual operating expenses are paid from the fund's assets. Different funds can charge different amounts. Those costs reduce the **return** received by participants. A fund with higher costs must perform better than a lower-cost fund to produce the same result for its participants. The published fee table makes these costs visible, even when they are paid indirectly.

E The SEC's explanation also separates historical performance from a future guarantee. Changes in the **market** can reduce what a fund owns, and past results do not predict future performance. Its registered status does not remove the possibility of **financial** loss. Public documents provide information about how a real product works and what it charges. Reading that information is therefore different from treating an impressive past result as a promise. The fund's method, costs and risks remain parts of the same description, rather than optional details outside the advertised result.

Questions 1-10 Summary completion

Write **ONE WORD** from the indicated paragraphs. Questions 1-5: **A, B**. Questions 6-10: **C, D**.

A fund combines money to buy a collection of **(1)** _____ . Registered **(2)** _____ manage what the fund owns. The main disclosure document is called a **(3)** _____ . The public database is **(4)** _____ . A shorter **(5)** _____ points to the full document.

Some funds seek assets expected to rise in **(6)** _____ . Those aims **(7)** _____ what the manager buys. A standard **(8)** _____ lists charges and expenses. A costlier fund must perform **(9)** _____ to match a cheaper fund's result. Some charges reach participants **(10)** _____ .
